Empowering Students - Together for Sustainability: Towards a Green Future in the European Union

We who live on such a small island are faced with so much pollution, now imagine across Europe.

Now it's time to join forces and make a change, because the future of Europe and our planet is in our hands. But without YOUR help this is not possible!

We need to find easy and effective ways to end this, and our planet to become beautiful and green again, as before.

Therefore, we are looking for ways to combat this, our idea is to make schools more active, not only encouraging and educating students but also make them, make a difference in the world. With the help of the European Union, we can elevate this idea to a European level.

All schools should monthly engage students in activities, that contribute to the improvement of our planet, for example: Local area clean-ups; reforestation; awareness campaigns about global impact; reuse of materials in practical projects.

For schools to take this measure seriously, the following law should be implemented: If schools fail to do the proposed activity, a fine proportional to the number of students attending the school should be applied.

Join us! Together, we can influence politics and inspire real change.

Our vision is a green future, and we know that together, we can achieve it.
